

Swimming and spa pools have often been cited as causes of water borne disease. In order to safeguard the health of the users, the water quality of swimming or spa pools should be checked regularly.

According to the Hong Kong Swimming Pools Regulation (Chapter 132CA), the licensee of a swimming pool should make sure the water quality could meet the following requirements:

| Parameter | Requirements |
|-----------------------|-----------------|
| pH | 7.0 – 7.8 |
| Turbidity | ≤ 5 NTU |
| Colour | ≤ 5 Hazen Units |
| <i>E. coli</i> | Nil per 100 mL |
| Total Bacterial Count | ≤ 200 cfu/mL |

Enviro Labs Ltd. is a HOKLAS accredited laboratory and has been analyzing swimming pool waters for over 10 years. The test report issued by our laboratory is recognized by the Government Department and it could tell the users that the water quality of your swimming pools or spas are up to standards.

Now you could enjoy **special rate** for our testing services. Please call Mr. Kenneth Lam at 2676 2983 (or e-mail at ell@envirolabs.com.hk) for details.

Pool Water Inspection Program

- ◆ On-site sampling service
- ◆ Water quality examination
 - pH,
 - turbidity
 - colour
 - free residual chlorine
 - *E. coli*
 - Total Bacterial Count
- ◆ Test certificate (including comparison of test results with standards)
- ◆ Recommended Frequency of Testing: Weekly
